THE **GREEN** WAY TO SLEEP

WHAT WE ARE MADE OF

SOLID WOOD BEDS

THE BEAUTY OF NATURE

and many hours of handwork
with attention to detail express
the true character
of our solid wood beds

OUR SOLID WOOD BEDS

are handcrafted. This begins with the selection of each individual plank. This way, the particular grain and colour characteristics of each type of wood are taken into account during processing. The result is a unique piece every time.

Wood is a natural product. Every tree grows differently; variations in wood colour or grain, as well as a stray knot, give your bed its unique character. Colour variations are also possible due to sapwood.

BEECH FAGUS SYLVATICA

The beech we use is the most common deciduous tree species in Germany. The correct botanical name is actually common beech, due to the slightly reddish colour of the wood, which is visibly enhanced by steaming.

HEARTWOOD BEECH

Heartwood beech is the heartwood of the European beech, and is called that when the heartwood is particularly striking in colour due to its more vibrant grain. We value heartwood beech for its unique colour variations.

DESIGN BEECH DESIGN BUCHE®

Our Design Beech is characterized by a modern look combined with a unique aesthetic. The beech used for this exceptional appearance comes from sustainably managed regional forests. Finely sanded and oiled, they give each piece of furniture a distinctive look.

OAK QUERCUS RUBOR (there are approximately 400 subspecies)

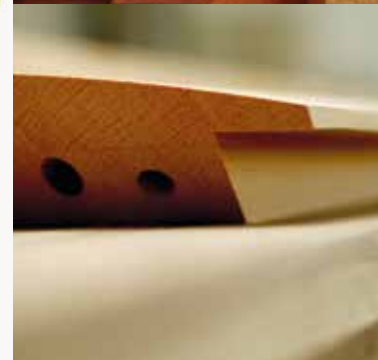

The oak we use is the second most common deciduous tree in Germany and belongs to the white oak family. Oak wood is rather light brown and characterized by high density and hardness. The heartwood is darker due to deposits of tannic acid.

OAK WHITE PIGMENTED

By adding white pigments to the wood oil, the oak acquires a light wood colour without „covering“ the grain.

OAK | WILD OAK BIANCO

The BIANCO wood oil neutralizes the uneven colour of the oak or wild oak and highlights the beautiful grain.

WILD OAK

Wild oak is the name given to oak wood that is particularly notable for its dark, sometimes cracked knots, giving it a very distinctive and vibrant appearance. Sometimes these knots need to be filled with wood putty to create a smooth surface. This is something to keep in mind when choosing wild oak.

WILD OAK BRUSHED

Classic wild oak with a completely new, unparalleled look. The solid wood undergoes a special mechanical process in which softer wood particles are brushed out of the surface using a steel brush. The result is a unique feel and rustic grain.

CHERRY PRUNUS AVIUM

The cherry wood we use comes from the wild cherry tree. Cherry has a yellowish-red colour with beautiful grain and is a sought-after precious wood; the sapwood is yellowish-white. We use North American cherry, which has a more uniform, more beautiful colour than European cherry. Freshly cut, cherry is quite light in colour, but darkens considerably over time to a very beautiful reddish-brown shade.

WALNUT JUGLANS REGIA

In North America, this tree is cultivated for walnut harvesting, whereas in our country, the European walnut tree only grows wild and sporadically. Walnut is one of the finest hardwoods and has therefore long been used in high-end furniture making. American walnut is characterized by a purple to dark brown colour, while the white-yellow sapwood is lighter. Walnut tends to brown with a yellowish tinge when exposed to strong daylight. Therefore, it should not be exposed to direct sunlight if this discoloration is not desired.

SWISS PINE PINUS CEMBRA

Swiss Pine is the name given to the Swiss stone pine. In the Alpine region, where this noble and robust pine species grows, it is also known as Arve and Arbe. Swiss Pine grows in Europe in the Alps and Carpathians. We source our Swiss Pine wood from the Austrian high Alps. The trees grow up to 25 meters tall and can live for over 1,000 years. Swiss Pine is a softwood, so, like pine, it is somewhat more susceptible to pressure marks than our other hardwoods and can contain resin ducts. Swiss Pine exudes a wonderfully warm and soothing scent and creates a pleasant, soothing, and relaxing atmosphere. To avoid compromising this effect, we only finely sand the Swiss Pine wood and do not apply any further surface treatment.
