

100% NATURAL LATEX MATTRESSES

HANDMADE IN GERMANY

dormiente®
THE GREEN WAY TO SLEEP

dormiente®

THE **GREEN WAY** TO SLEEP

We've been producing mattresses and bed products under this motto at dormiente since 1988. After all, nature offers everything you need for healthy, restorative sleep. You won't find any plastic or synthetic materials in our products. Instead, we produce high-quality, eco-friendly ergonomic products that regularly undergo rigorous testing for harmful substances. All lovingly made by hand at our production facilities in Heuchelheim, Germany.

dormiente: Good for you and the environment.

Natural latex mattresses offer a whole host of excellent ergonomic lying properties while also capturing the harmful greenhouse gas carbon dioxide. It's hard to find any other mattress material that tops the sustainable and impressive properties of natural latex.

dormiente
NATURAL MATTRESSES
LAST LONGER

Natural latex retains the same elastic properties over a very long time.

NATURAL LATEX

WHY IT'S THE BEST CHOICE?

At dormiente, we exclusively use 100% natural latex to produce our mattresses, without the addition of any synthetic latex. Natural latex offers outstanding point elasticity. Our natural latex mattresses compress exactly where under pressure from your body without affecting the rest of the mattress.

When you turn in your sleep, the previously compressed area gently decompresses. High point elasticity is crucial when it comes to allowing your muscles to relax and ensuring nutrients can be transported to the discs in your spine while you sleep. Natural latex is also a renewable raw material with a verifiably better ecological footprint than synthetic mattress materials. Our natural mattress covers ensure optimal breathability for the mattress underneath.

Pin-core structures equally distributed across the mattress ensure the perfect mattress and good ventilation.

CLASSIC NATURAL LATEX MATTRESSES

MADE WITH A 100% NATURAL LATEX CORE AT OUR PRODUCTION FACILITIES

The unique ability of natural latex to yield to pressure ensures that heavier parts of the body like the pelvis and shoulders sink into the mattress, tracing the natural S-shape of the spine. Our single zone mattresses also perfectly mould to your body.

AT A GLANCE

- + malleable natural mattress with high point elasticity that moulds to your body
- + strong body support and distribution of body weight thanks to impressive natural latex core
- + great choice for people of average weight
- + for lighter-weight people who sleep on their front (,medium' latex firmness)
- + for heavier-weight people ('firm' latex firmness)

THE DORMIENTE SOLUTION FOR COUPLES

2 in 1 – sleep in the same bed without an annoying gap in between. Our couples mattress cover allows you to lie together in full comfort. The mattress cover joins two mattresses to form one single surface to lie on.

MORE LATEX = MORE COMFORT

All the comfort you need for a good night's sleep. The height and firmness of a mattress are key factors in determining how comfortable your sleep will be.

Contact your local dormiente retailer to learn more.

SPECIAL NATURAL LATEX MATTRESSES

PRODUCED WITH 5 AND 7 ZONES AT OUR PRODUCTION FACILITIES

With precise transverse cuts, we are able to offer enhanced lying comfort by creating additional support areas for prominent parts of the body. In this way, we provide optimum comfort for the different body shapes of men and women, for example.

AT A GLANCE

- + distinctly body-hugging mattress with orthopedically effective cuts in the shoulder area, and in the FEMALE version in the hip area as well
- + protects sensitive body parts due to effective pressure distribution
- + ideal for people with problems in their shoulder and hip areas
- + excellent air regulation
- + top nesting sensation for a comfortable night's sleep
- + recommended for people who primarily sleep on their back or sides
- + also ideal for lighter-weight, sensitive people

5 AND 7 ZONES

Get the restful sleep you deserve thanks to support zones to sink into in different areas of the mattress. For ultimate comfort and restorative sleep!

THE DORMIENTE SOLUTION FOR COUPLES

2 in 1 – sleep in the same bed without an annoying gap in between. Our couples mattress cover allows you to lie together in full comfort. The mattress cover joins two mattresses to form one single surface to lie on.

SPECIAL NATURAL LATEX MATTRESSES

PRODUCED WITH 5 AND 7 ZONES AT OUR PRODUCTION FACILITIES

7 ZONES MATTRESS

THE FEMALE CONCEPT

Special incisions in the pelvic area and nuanced dissolution of the mattress surface tension ensure the mattress traces the contours of a woman's body

5 ZONES MATTRESS

THE MALE CONCEPT

By consciously avoiding deeper incisions in the pelvic area, we are able to provide optimal support to the narrower male hip/pelvic area along with finely dissolved surface tension for a mattress that adapts to a man's body.

Anatomically speaking women and men differ fundamentally in their body shape. In an ideal world, men and women would be able to sleep equally well on the same mattress because it takes their specific needs into account. At dormiente, we have come up with the solution.

MATTRESSCOVERS

Mattress covers keep your mattress breathable. By removing moisture from the surface, they ensure that you can always sleep comfortably dry with either firm or soft support, depending on the type of cover you select. With a few small exceptions, almost all mattresses are available with the cover of your choice. Contact your local dormiente retailer to learn more.

Our exclusive mattress covers leave nothing to be desired.
Read on to discover the variety of mattress covers we offer.

dormiente HYGIENE PLUS

At dormiente, we combine washable outer covers made from hemp or cotton with a quilted inner cover such as hemp or virgin lamb wool.

GOOD FOR PEOPLE, GOOD FOR NATURE

A natural latex mattress weighs 21.5kg on average and therefore requires roughly 21,500g latex milk. Harvesting a rubber tree yields roughly 30-40g of latex milk each day. A rubber tree can be harvested 204 days each year. That means 537 harvest days are required to produce a mattress, amounting to roughly 2.5 years. During this entire harvesting period, the rubber tree is able to sequester carbon from the earth's atmosphere. This powerful benefit lasts far longer than the product of a single mattress – the productive life of a rubber tree is typically around 35 years.

The material that's so good for restorative sleep,
is also especially good for our climate.

We maintain longstanding relationships with our natural latex suppliers in South Asia. By nurturing long-term bonds, we are able to conduct regular on-site inspections to check that our strict quality requirements for the finished latex blocks and our dormiente sustainability principles are being upheld.

SLEEP ENSEMBLE MIT **WITH A SYSTEM:** THE SECRET TO PERFECT SLEEP LIES IN THE COMBINATION!

DUVET

PILLOW

MATTRESS

SLATTED BASE

Getting healthy, restorative sleep requires more than just selecting the right mattress.

Level up your mattress with the ideal combination of mattress, slatted base, pillow and duvet for your needs. For the perfect night's sleep, every night!

A **SLATTED BASE** provides the foundation for every mattress. Slatted bases do more than simply keep mattresses ventilated. Modifiable slatted bases help to support and relieve your body by allowing fine adjustments. dormiente partners specialise in naturally healthy, ergonomic sleep. They will work with you to find the perfect combination for your needs.

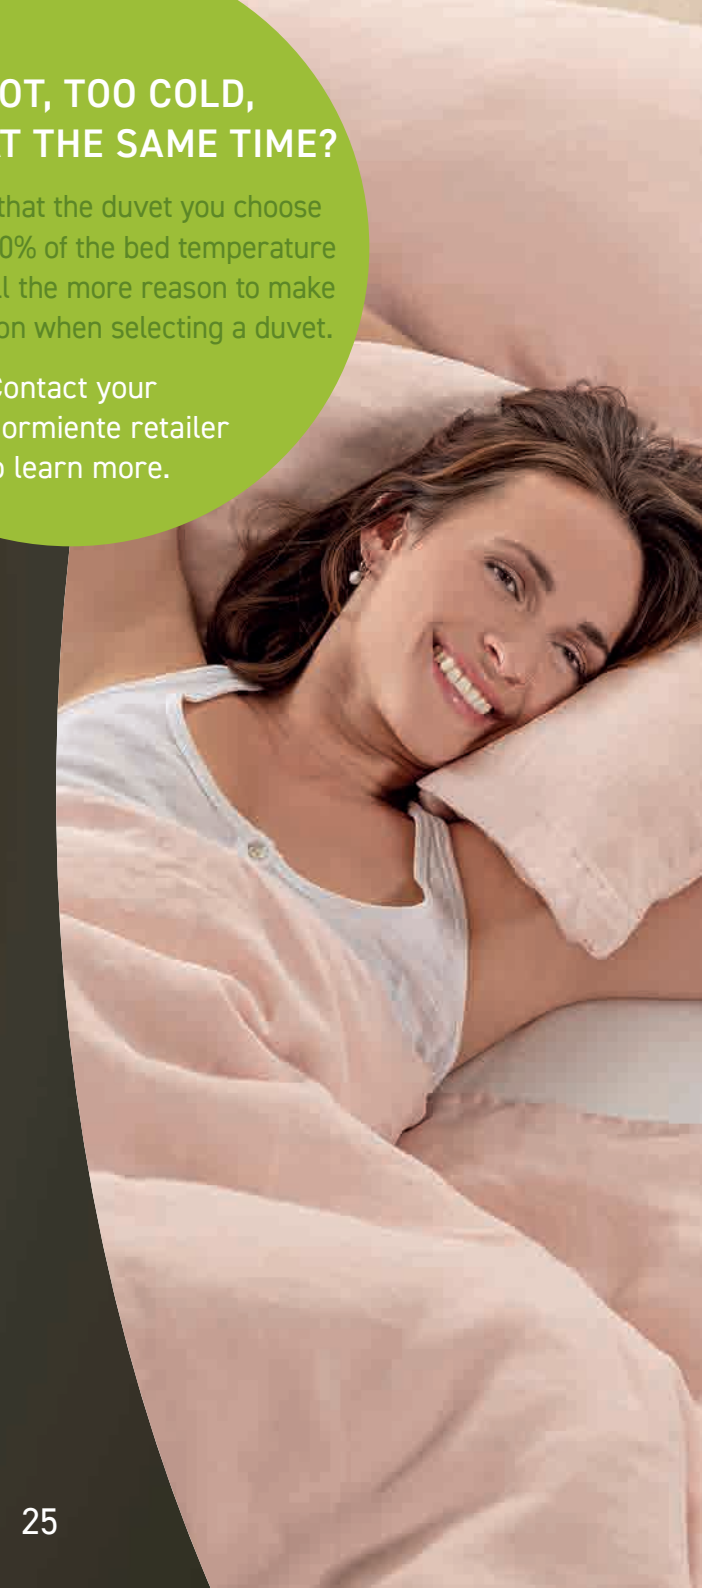

DUVETS can also play a major role when it comes to sleep quality. After all, it's hard to sleep well under a damp duvet. To avoid this, it's important to pick a duvet that quickly absorbs any moisture from your skin and prevents uncomfortable cooling due to evaporation in the first place. This is where natural materials come in. Whether you tend to sweat or get cold in bed – or experience both – dormiente duvets provide the ideal climate for a great night's sleep.

The importance of **PILLOWS** when it comes to restorative sleep is often overlooked. Often purchased without a second thought, pillows are a key component to healthy shut-eye. As anyone with a vast collection of pillows yet also unwavering neck pain can attest. Don't rush when selecting a pillow – seek advice and try out.

TOO HOT, TOO COLD, OR BOTH AT THE SAME TIME?

Did you know that the duvet you choose dictates up to 70% of the bed temperature you sleep in? All the more reason to make the right decision when selecting a duvet.

THE RIGHT **PILLOW** FOR EVERY SLEEP POSITION

From an orthopaedic perspective, correct positioning of the cervical spine is crucial. If you wake up with tension in your neck or shoulder area, this could indicate that your head isn't in the correct position at night due to not using the right pillow. Pillows should ideally support your head and mould your cervical spine as naturally

LOOSE FILLED PILLOWS

PERSONAL PILLOW ENHANCEMENTS

Removing the filling from pillows couldn't be simpler, allowing you to adjust it to your individual requirements.

(height approx. 13 cm)
soft and individually adjustable

as possible. Due to the small, limited nature of the neck area, proper head positioning can often be hard with personal preferences often being counterproductive, e.g. I think my head should be higher. Factors such as comfort and breathability also play a role. The dormiente sleep expert partners will be happy to advise you and help stop neck pain happening in the first place.

SHAPED PILLOWS

WITH ORTHOPAEDIC MOULDED CORE

MADE OF 100% NATURAL LATEX

Impressively high point elasticity ensures the pillow adapts to the shape of your spine. Different moulded cores are suitable for different sleeping positions and body shapes.

Choosing the right duvet is key when it comes to getting a good night's sleep. A duvet dictates roughly 70% of the climate of your bed, allowing you to sleep comfortably at the right temperature. dormiente **NATURAL SUMMER DUVETS** offer the ideal respite for hot summer nights. Our **ALL-YEAR DUVETS**, on the other hand, are the ideal choice for all non-extreme temperatures. Combine both for a warm, comfy winter duvet that's perfect for chilly nights.
